Education

Y.I.A.S.C.M x Kalvium, Mangalore - BCA (Hons.) in Computer Applications
July 2023 - July 2027 | Current CGPA: 8.1 (4th Semester)

Atomic Energy Central School, Kaiga - 12th Grade
2018 - 2019 | CGPA: 7.4

Technical Skills

Programming Languages: JavaScript, Python, C++, TypeScript

Frontend Development: React.js, Next.js, HTML5, CSS3, TailwindCSS, Liquid

Backend Development: Node.js, Express.js, Elixir, Python (Flask/Django)

Databases: MongoDB, MySQL, PostgreSQL, Firebase, Redis

DevOps & Cloud: Google Cloud Platform (GCP), Docker, Git, GitHub Actions, CI/CD

Other Tools: AI/ML (Xenova Transformers), GraphQL, REST APIs, Authentication (Passport.js)

Achievements

- Solved 100+ Data Structures and Algorithms (DSA) problems on LeetCode and GeeksforGeeks, demonstrating strong problem-solving skills.
- Contributed to team success in coding competitions at Antarya National IT Fest, securing top placements.
- Led participation in an AI Hackathon, advancing to the final round and showcasing innovative AI integration.

Summary

Dynamic Full-Stack Developer with expertise in React.js, Node.js, MongoDB, and cloud platforms like GCP. Proven track record in developing scalable web applications, optimizing performance, and delivering high-impact solutions. Skilled in problem-solving, team collaboration, and continuous learning to drive innovation in agile environments.

Experience

Full-Stack Engineer Intern - ChannelBlend Technologies

April 2025 - Current

- Contributed to developing and optimizing the Shopify store for Stagbeetle, improving user experience and integration with backend systems.
- Developed the Intent Parser module for AI-powered WhatsApp conversations, enhancing automation and response accuracy.
- Built a comprehensive Debug Panel for workflow monitoring, reducing debugging time by 30% and improving team productivity.
- Implemented data ingestion pipelines using JSON and Shopify GraphQL API, ensuring efficient data processing and scalability.
- Assisted in creating automation testing scripts, achieving 95% test coverage and minimizing deployment errors.

Projects

GradeFlow - AI-Powered Study Tracker

GitHub Repository

January 2025

- Developed an intelligent AI-powered study tracker using Next.js, Node.js, Express.js, MongoDB, and Xenova Transformers, improving task management efficiency.
- Implemented automated smart notifications for deadlines and assignments, increasing user productivity by 40%.
- Prototyped during an AI Hackathon, advancing to finals and demonstrating innovative AI in education.

SkillConnect - Collaborative Skill Discovery Platform

GitHub Repository

March 2024 - September 2024

- Built a dynamic platform for skill discovery and sharing using React, Node.js, and MongoDB, enabling seamless collaboration.
- Integrated secure Google Authentication via Passport.js, ensuring robust user access and data protection.
- Implemented efficient file uploads with Firebase, supporting user profiles and resource sharing with 99% uptime.

ANZ - Authentication and Authorization Microservices

GitHub Repository

March 2025 - April 2025 (Personal Learning Project)

- Explored secure authentication and authorization microservices as a self-study initiative to build foundational knowledge.
- Gained practical experience with Python, TypeScript, and Docker for containerized development.
