Abhishek G Naik

Full-Stack Engineer — Backend & Data Systems

abhisheknaik1112@gmail.com | +91 7337866611 | linkedin.com/in/abhisheknaik1112 | github.com/AbhishekNaik1112 | Karwar, Karnataka

SUMMARY

Full-stack engineer building backend services, REST APIs, and data-ingestion pipelines on PostgreSQL — Python/FastAPI and Elixir/Phoenix. Ships production systems end-to-end: webhook-driven ingestion pipelines, entity-relationship graphs, hybrid retrieval over pgvector, and LLM evaluation harnesses.

TECHNICAL SKILLS

Languages | Python, TypeScript, JavaScript, Elixir, C++, SQL

Backend & APIs | FastAPI, Elixir/Phoenix, Node.js/Express, NestJS, Django REST Framework, REST APIs, data ingestion pipelines, JSON Web Token (JWT) auth, HMAC webhooks

Frontend | React.js, Next.js, Tailwind CSS, Redux, Zustand

Data & AI | PostgreSQL, pgvector, Postgres Full-Text Search, MongoDB, Redis, embeddings (CLIP, sentence-transformers), hybrid search (RRF), LLM evaluation

DevOps | Docker, GitHub Actions, CI/CD, Google Cloud Platform, Git

EXPERIENCE

ChannelBlend Technologies Apr 2025 - Oct 2026

Full-Stack Engineer Intern | Remote, India

- Shipped a cross-service Ad Performance system (Elixir/Phoenix API + Next.js dashboard) — partial indexes, statement-timeout guards, and a 6-tile analytics page with funnel and trend views.
- Built the intent-parser core and AI sales-agent persona (Python/FastAPI) driving WhatsApp conversations across 4 retail verticals.
- Designed an LLM evaluation harness — judge rubrics, a replay runner, 100+ scripted journey tests — to catch agent regressions before release.
- Led a leads-pipeline and conversations redesign on the React/TypeScript dashboard — closing-value tracking, visit scheduling, handover alerts — backed by 48 Playwright e2e tests.

PROJECTS

Knowledge Atlas — hybrid-search catalog API Jul 2026

FastAPI | PostgreSQL / pgvector | Live | GitHub

- Built and deployed a FastAPI REST API over PostgreSQL — 11 endpoints on Render + Neon — ingesting documents via an idempotent, HMAC-SHA256-verified webhook pipeline.
- Modeled documents and their cross-references as an entity-relationship graph (typed edges, backlinks, whole-catalog graph endpoint) for traversal and search.
- Designed hybrid retrieval fusing Postgres Full-Text Search with pgvector cosine via Reciprocal-Rank Fusion; built test-first with 116 passing tests.

RankForge — local-first multimodal search engine Dec 2025 - May 2026

Electron | React | FastAPI | pgvector | GitHub

- Built a hybrid ranker over 512-dimension CLIP embeddings with pgvector HNSW indexing, scoring semantics, keywords, graph authority and freshness.
- Shipped a local-first desktop app that extracts and indexes PDF, DOCX, PPTX and image files entirely on-device.

FraudLens — fraud-detection analytics dashboard Mar 2025

Next.js | MongoDB | Gemini AI | Live | GitHub

- Built a real-time dashboard with 30-day trend analytics and a Gemini-AI analyst assistant behind Role-Based Access Control (admin / analyst).

Medisure — insurance claims platform Mar 2025

React | NestJS | MongoDB | JWT | Live | GitHub

- Built a full-stack claims platform with a NestJS REST API, JWT auth, and role-based access.

EDUCATION

BCA (Hons.), Computer Applications — Yenepoya University | CGPA: 8.00 / 10.00 Jul 2023 - Jul 2027

Class XII, CBSE — Atomic Energy Central School, Kaiga | CGPA: 7.40 / 10.00 2019

Class X, CBSE | CGPA: 8.00 / 10.00 2017

ACHIEVEMENTS

- AI Hackathon finalist — reached the final round with GradeFlow, an AI-powered study tracker.
- Solved 100+ Data Structures and Algorithms problems on LeetCode; 180+ public repositories on GitHub.
